

# C-PARTS

---

# COMPAT

Compat Series polypropylene containers are the ideal solution for any storage requirement - in warehouses, in workshops, and along assembly lines. They allow all contents to be always clearly visible and ready at your fingertips - making withdrawal extremely easy. These containers are stackable in a stable and safe manner and the ready availability of the material is ensured even when they are stacked.

# BOTTOM

smooth bottom

A

ribbed bottom

B

45° ribbed bottom with cross bar

E

## CROSS BAR

The containers are fitted with a cross bar fixed to the front of the container – the function of which is avoiding any deformation of the side walls in the event of large-volume loads and making the container easier to grab.

## SIDE REINFORCEMENT

A side stiffener on the bottom allows containers to be stacked while ensuring maximum safety even under full load conditions.

## LIFTING

Lifting and handling are made possible by practical handles for quick gripping even with gloved hands.

## CODING Compat

PACKAGING 1 - Quantity per carton

Made of transparent polystyrene, the screen allows for the contained product to be easily identified and, at the same time, protected from dust. It can be hinged on the front of the container and, when closed, it increases the load capacity.

# ZEUS

The polypropylene containers from our Zeus series meet any special material handling and storage need. They are easy to handle and lightweight, plus their smooth interior makes them easy to clean; in addition, they are built with sturdy edges for stacking strength and safety. Stackability, combined with high containment capacity, enables to make the most of the available space.

## SIDE REINFORCEMENT

A side reinforcement on the bottom allows boxes to be stacked while ensuring maximum safety even under full load conditions.

# RK

Everything neatly arranged and clearly visible in a flexible and functional warehouse: this was the result that we achieved after we set out to design our Multibox F PK series storage polypropylene boxes and shelving. Available in ten different sizes to meet every need, the boxes are particularly suitable for spare parts dealers – thanks both to their resistance to oils and to their internal partitioning options.

# SIDE WALLS

Made of first grade polypropylene, the Multibox F PK series boxes have walls reinforced by special ribs for impact resistance.

# BOTTOM

Smooth bottom

# HANDLES

A special handle, supplied on request, facilitates lifting and handling Multibox F PK series boxes.

# MARKING

See page 956

# LABELS

Equipped with label holders, available in different sizes proportionally to the size of the boxes to which they are applied.

# DIVIDERS

Made of transparent polystyrene, bin dividers allow box internal space to be divided into several compartments.

# RK-BOX

RK boxes are ideally suitable for special RK-BOX racking systems: made of sheet steel, they have been designed according to modular criteria to meet multiple operational needs. In the upper part, the rack has two positioning wings to facilitate stacking, while a plinth can be inserted in the lower part. Shelving units of the same depth, or of decreasing depth, can be placed on top of each other. The shelves are fixed and have slots for inserting guides to ensure box sliding.

## FRONT STOP

The racks can be installed on vans. In this case, it is advisable to use special galvanised steel stops to prevent the boxes from slipping off.

## REAR STOP

Galvanised steel retainer that prevents the boxes from slipping off the shelves when they are pulled out.

## RACK STACKING

## PLINTH INSERTION

# PRACTIBOX

The Practibox series chests of drawers consist of a grey ABS structure and transparent high strength polystyrene drawers.

Available in different models by depth and height, they all have a width of 600 mm which allows them to be stacked in a variety of combinations.

# DRAWERS

The drawers, made of high strength transparent polystyrene, are housed in a special ABS container, designed to be fitted on Practibox series shelves or trolleys or fixed to the wall with anchors.

# STACKING

Available in different models by depth and height, Practibox series chests of drawers all feature a width of 600 mm. Thanks to this feature, modules of the same depth and of decreasing depth can be stacked, allowing for a variety of combinations.

# FRONTAL OPENING

Featuring a convenient tilting opening, the Practibox series drawer units ensure optimal access to the contained product.

# ORGANISATION

Equipped with a practical handle, the Practibox series drawer units optimally respond to the most diverse needs.

THE SHELVING UNITS MUST BE FIXED  
TO THE FLOOR

# PRACTIBOX

## VERTICAL SYSTEM

The vertical system consists of a modular cabinet to be completed by inserting drawers and with Practibox drawer units. The cabinet consists of a steel structure, specially shaped and strengthened to withstand heavy loads: it is supplied as standard with a single drawer opening device and must be fixed to the floor or a wall. The drawers slide on telescopic guides installed on ball bearings that guarantee easy opening even under full load conditions.
